EDUCATION

University of Michigan, B.S. 2019

Areas of Study: Philosophy & Computer Science

EXPERIENCE

Capital One | Senior Software Engineer (Principal Associate), AI Engineering June 2025 – Present

- Tech lead for a multi-agentic LLM system that helps car dealerships sell vehicles through a conversational interface; owned architecture and execution across a team of 6 engineers.
- Shipped a real-time bilingual conversation layer enabling Spanish-speaking buyers and English-speaking dealers to transact through the same AI agent, including a "takeover" mode where dealers seamlessly step in mid-conversation across the language barrier.
- Designed and led the development of a dealer-scoped knowledge base and RAG pipeline so each dealership's inventory, policies, and product context surface dynamically in agent responses.
- Built the team's tool and skill framework for agentic workflows, including single- and multi-turn qualitative evaluation harnesses that doubled agent reliability scores.

Revel | Software Engineer III (promoted from II), Rideshare Pricing Algorithms July 2022 – June 2025

- Increased net rideshare revenue 2.2% by ingesting real-time driver utilization signals into the pricing engine to dynamically set per-ride driver revenue share.
- Redesigned NYC pricing algorithms on Uber's H3 hexagonal spatial index, enabling granular pickup/drop-off multipliers and materially improving location-based pricing accuracy.
- Built a dynamic discounting system that targets users based on predicted ride-conversion likelihood, boosting customer engagement and conversion metrics.

iZotope | Software Engineer, Build & Release / Continuous Integration February 2021 – July 2022

- Cut installer release time from several days of manual, cross-team work to minutes via a one-click automated build pipeline, unblocking iZotope's transition from perpetual licenses to subscriptions.
- Built a developer-facing build-agent status dashboard on AWS Lambda + CloudWatch, surfacing previously opaque CI health data in real time.

Amazon | Software Engineer, Alexa, Data Transformation & Publishing September 2019 – February 2021

- Reduced ML scientist dataset onboarding from 3-4 weeks to 1-2 days by streamlining the path from raw Alexa data to scientist-ready custom datasets.
- Productionized a cost-attribution system tracking S3 reads/writes via Lambda and access logs, giving internal teams actionable cost-saving recommendations.
- Built a data exploration UI for ML scientists to search and browse Alexa data schemas, accelerating model iteration.

PROJECTS

Helm github.com/ivashi/helm

Personal finance dashboard for net worth, budgeting, retirement projections, and property management. Built local-first with on-device SQLite so financial data never leaves the user's machine.

Stack: FastAPI, React + Vite, Recharts, SQLite.

SKILLS & OTHER

Languages: Python, TypeScript/JavaScript, SQL

Frameworks & Libraries: FastAPI, Django, React, SolidJS, LangGraph

Certifications: AWS Certified Solutions Architect Associate

Interests: Chess, music, soccer, espresso, reading
